ANTIMICROBIAL FLOORING

Antimicrobial Flooring for the Food,  
Beverage and Pharmaceutical Industries

# The Allied Finishes Story

Australia's culture is remarkably diverse. So too are its industries, none more so than food production. Since Australia was first populated the challenges faced have been unique. And as food and beverage production has developed food chemistry has grown in importance. Plus the many related industries such as transport, warehousing and retail. Allied Finishes had its beginnings in the early 1970's but its heritage goes back much further.

It began with Laurie Gillies. In the first half of last century he qualified as a food chemist. Too young to serve in the first World War, by the time the second one broke out he was classified as belonging to an essential service. By report his formulations were excellent-scrumptious in fact.

But his son Graham decided that paint chemistry would be a more stimulating study than dreaming up recipes for coloured jellies.

So began the development of polyurethanes in Australia. The product "Imperite" was Graham's brainchild, and it's still being specified and used today. A massive tonnage of this product was used in the 1960's for the Snowy River Hydro-Electric Scheme. This was one of many projects instigated during the huge take-up of infrastructure which took place after the Second World War. The use of polyurethane coating was firmly established and has never looked back.

With this strong history of chemical innovations behind us, our interest was sparked in flooring solutions for the food and beverage industry. We saw the need of this sector to maintain a hygienic, food-safe environment, ideally with a 0% chance of bacteria survival. We recognised that to maintain this high level of hygiene required; the flooring must withstand attack from chemicals (including cleaners and concentrates), food acids, corrosive liquids, oils, and sugars. This was the Food & Beverage challenge we felt we could master.

Our mission, as focused on the food and beverage industry, became 'to reduce production downtime, and deliver increased uptime'. To do this, we've passionately developed and refined flooring systems that are very fast to install (reducing production downtime) and are also extremely durable and long-lasting (delivering increased uptime).

# SteriFloor

## Unique Advantages and Benefits

According to the Australian Food Safety Standards, **“Floors must be designed and constructed in a way that is appropriate for the activities conducted on the food premises.”** To clarify this, they state, **“Floors must be able to be effectively cleaned, be unable to absorb grease, food particles or water, be laid so there is no ponding of water and, to the extent that is practicable, be unable to provide harbourage for pests.”** This clear direction highlights that there is no room for error.

Our SteriFloor range contains world-leading antimicrobial technology. Unlike antibacterial sprays, which will quickly lose their effectiveness, our additives provide permanent, around-the-clock protection against unseen microbes for the lifetime of a product.

One of our major antimicrobial additive suppliers is Biocote, a widely acknowledged antimicrobial solutions provider.

## Slip Resistance Flooring

Non-slip flooring is essential in Food manufacturing plants, as it protects staff and visitors (including customers and auditors) from slip hazards. Non-slip flooring provides grip for forklifts and other moving vehicles and trolleys. Each facility and often different areas in the same facility require different non-slip profiles to cater to the specific needs. Our SteriCoat NS-Mut range answers this need with a choice of non-slip media additives that will ensure the grip is level you require.

## Thermal shock resistance

Floors that are subject to diverse thermal variations require a system specifically designed to withstand such aggressive conditions. Our SteriFloor Stärke product offers exceptional resistance to high temperatures and extreme thermal shock conditions including routine and regular discharges of boiling water and steam.

## Chemical resistance

Our SteriFloor systems are designed to resist the commonly encountered manufacturing chemicals such as Acetic acid, Lactic acid and Oleic acid from vegetable and animal fats. In heavy industrial processing facilities, SteriFloor Rutschig is also used as a chemically resistant surface for chemical bunds.

## Odourless application

Our SteriFloor range is non-toxic and nil-odour, even when being laid, so is completely food-safe, and will not cause inhalation issues to personnel in the workplace.

## Durability

Our SteriFloor range has been designed and developed with durability and longevity in the forefront of our minds. We understand the conditions it will be subject to, and see the need to meet this adequately, reducing production downtime, and delivering uptime to our customers.

# System Benefits

- Antimicrobial Flooring System
- Chemical, Temperature & Impact Resistant
- Asset protection with long term durability
- Meets Regulatory requirements with HACCP
- Easy to Clean
- Available in a wide range of colours
- Fire Resistant
- Moisture tolerant & compatible to newly cured concrete
- Odourless, non-tainting to food
- Optional long-lasting slip-resistant surface

# Areas of Application

All Food & Beverage Facilities, including:

- Meat processing plants
- Dairy production facilities
- Warehouse and distribution centres
- Chiller rooms
- Food waste/treatment plants
- Commercial kitchens and bars
- Dry packing rooms
- Flour Mills
- Wet processing areas

# Product Details

## SteriFloor Schützend

Food grade anti-microbial floor, ideal for medium-duty environments. Nil odour, good cleaning properties, even satin finish.

First Layer	Stericoat 310 Reparatur
Second Layer	SteriCoat 110 Allzweck
Third Layer	SteriCoat 110 Allzweck

## SteriFloor Stärke

Fast-curing, food grade, anti-microbial, premium floor. Ideal for heavy traffic environments. Suitable for dry or wet production areas, effective in coolrooms and freezers. Has excellent chemical resistance, and has great impact and abrasion resistance.

First Layer	Stericoat 310 Reparatur
Second Layer	SteriCoat 210 Panzerung
Third Layer	SteriCoat 220 Oberste

## SteriFloor Beschützen

Food grade antimicrobial, fast curing premium floor. Ideal for high wear areas with heavy foot traffic, and medium forklift traffic. Good impact and chemical resistance.

First Layer	SteriCoat 220 Oberste
Second Layer	SteriCoat 220 Oberste

## SteriFloor Schnell

Quick-cure, food grade antimicrobial floor. Excellent for tight downtime windows, suitable for warehouses, packing halls, and processing areas with heavy foot traffic and light to medium forklift traffic.

Complete System	SteriCoat 220 Oberste
-----------------	-----------------------

## SteriFloor Keimfrei

Antimicrobial concrete flooring system ideal for laboratories and clean rooms. It provides a hard-wearing surface, with excellent cleaning properties and a great appearance. Has supreme chemical and abrasion resistance & is available in selected colours.

First Layer	SteriCoat 330 Solide
Second Layer	SteriCoat 350 Wallend
Third Layer	SteriCoat 350 Wallend

## SteriFloor Sauber

Antimicrobial concrete protection system ideal for oily floors. It has been designed to overcome the issues caused by heavy exposure to oils, and provides a hard-wearing surface, with good cleaning properties and an excellent appearance. Has good chemical and abrasion resistance & is available in selected colours.

First Layer	SteriCoat 320 Durchdringen
Second Layer	SteriCoat 340 Konsistent
Third Layer	SteriCoat 360 Rutschfest

# Colours

N35 Light Grey

N11 Pearl Grey

N63 Red Oxide

B43 Grey Blue

G13 Emerald

B41 Bluebell

R14 Waratah

G24 Fern Tree

Y26 Homebush Yellow

N65 Graphite Grey

G37 Beanstalk

R13 Signal Red

# SteriCove Solution

## Food grade coving

- Prevents water seeping under the wall
- The curved surface makes it easy to clean & maintain
- Eliminates cracks and bacteria growth
- Meets stringent regulatory requirements
